

## 6. Endovascular aneurysm repair

### Demographics

92% (49/53) of patients undergoing EVAR were male. The age range was from 59 to 88 years (Figure 1).

**Figure 1.** Age of endovascular patients  $n=53$

43 were admitted for an elective procedure, three were emergencies, and one an emergency transfer. The method of admission for the remaining six cases was unknown.
