

## **CASE NOTE REVIEWERS REQUIRED NCEPOD Prison Healthcare Study**

NCEPOD is undertaking a new study to investigate the remediable factors in the clinical care and organisation of healthcare for people who died from a 'natural' or other 'non-natural' (eg. accidental poisoning/adverse reaction to prescribed medication) death whilst detained in prison.

The key objective of this study is to produce focussed, evidence-based recommendations to improve the commissioning, monitoring, provision and quality of healthcare in prisons, with the aim of preventing avoidable and premature deaths in the future.

We are recruiting a multi-disciplinary group of healthcare professionals with a working interest in prison healthcare. Case reviewers will be asked to attend meetings during which they will assess the healthcare records and NHSE commissioned clinical reviews of the study sample and provide expert opinion on the healthcare provided to prisoners prior to their death. An information session will be held online on Thursday the 1<sup>st</sup> of December 2022 from 17:30 to 19:00. You would typically be required to attend a minimum of 3 subsequent case reviewer meetings at the NCEPOD offices in London. It is anticipated case review meetings will begin in January 2023 and will run for approximately 6 months. The data collected during these meetings will form a major part of the study's final report. Travel expenses will be reimbursed, and lunch will be provided.

We are looking to recruit healthcare professionals who have experience of providing healthcare within the prison estate such as Prison GPs and nursing staff. We are also looking for GPs and nurses who work in the community and clinicians from acute hospitals from a wide variety of specialties (including, but not limited to acute, emergency, general, respiratory, palliative and geriatric medicine; anaesthetics, pharmacy, gastroenterology, and cardiology).

We aim to recruit clinicians from different clinical grades of at least ST6/Nursing Band 6 and above to ensure that applicants have enough experience for the case note review aspect. Applicants should be in current clinical practice.

Further information about this study including a copy of the study protocol can be found on the webpage:
